

JORDAN TRIPLETT

JordanT111596@gmail.com - Denver, CO - linkedin.com/in/jordantriplett - github.com/JordanT111596

Full-stack software engineer building Workday's apps for Slack, Microsoft Teams, and Microsoft 365 Copilot with TypeScript, AWS serverless, and Java. Background in React and React Native front-end development.

EXPERIENCE

Workday

December 2023 – Present

Workday Everywhere: Workday for Slack, Microsoft Teams, Microsoft 365 Copilot, Gemini Enterprise, and more Boulder, CO (Hybrid)

Software Development Engineer

May 2026 – Present

- Led an epic enabling approvers to approve or deny Workday business processes directly from Slack and Teams notifications: ran the spike, built an end-to-end proof of concept across the TypeScript platform and Java backend, authored the design doc, and coordinated delivery across engineering, QA, and design
- Built the shared approve/deny foundation, feature flag, localized messaging, and full Slack and Teams implementation
- Eliminated customer-reported duplicate notifications across the stack: deduplicated delivery on event-record IDs with atomic DynamoDB claims, emitted those IDs from the Java service, fanned out per recipient for multi-approver steps, and hotfixed the release candidate to reach customers ahead of the normal release train
- Built per-user notification rate limiting (token bucket with a weekly-capped nudge), shared by both notification systems
- Fixed a Java localization bug that sent time-off notifications in the approver's language instead of the recipient's
- Onboarded and mentored a new engineer from environment setup to first merged PR in six weeks

Sr. Associate Software Development Engineer

December 2023 – May 2026

- Core engineer on Workday's Microsoft 365 Copilot agent from early access through general availability, including its migration from a Declarative Agent to a Custom Engine Agent; owned Entra SSO authentication, DynamoDB tables and CDK infrastructure, connect/disconnect flows, and human-in-the-loop approvals with Adaptive Cards
- Merged Copilot into the Teams bot for GA, routing Teams vs. Copilot traffic through auth and admin flows
- Owned the Company Holidays epic end to end, rebuilding an Adaptive Card as a React modal on a new API with feature flags, BI metrics, end-to-end tests, and a CloudWatch rollout dashboard
- Owned the Coworker Lookup epic, moving it from direct REST calls to a GraphQL (Apollo) data layer with WQL-backed resolvers, IAM-scoped Lambda access, and RTK Query on the front end
- Hardened production by fixing a ReDoS vulnerability, cutting false-alarm error logging, repairing BI adoption signals, and migrating Teams web assets to a new S3 bucket behind CloudFront

Fluid Truck

April 2022 – September 2023

Front End Engineer

Denver, CO

- Built a new customer-facing React Native app from scratch with product and design, and automated its build and release pipeline with Expo EAS
- Maintained a private NPM component library used by internal teams, and partnered with cross-functional engineers on a new online delivery system that opened up new customer segments
- Led an engineering committee that wrote Jira guidelines and templates adopted across the technology department

Union.Co

March 2021 – April 2022

Front End Developer

Charlotte, NC

- Built features for consumer-facing sites in React and TypeScript, improved Core Web Vitals through image and font-loading optimization, and led site rebrands for clients
- Collaborated in an agile team to turn business needs into product solutions, troubleshooting and optimizing MySQL databases and integrating third-party REST and SOAP APIs

SKILLS

Languages: TypeScript, JavaScript, Java, SQL, GraphQL, HTML/CSS

Back end & cloud: Node.js, AWS (Lambda, DynamoDB, S3, CloudFront, SNS, CloudWatch), AWS CDK, SST, Docker

Front end: React, React Native, Redux Toolkit / RTK Query, Next.js, Expo/EAS

Platforms: Slack (Block Kit), Microsoft Teams & Bot Framework, Microsoft 365 Copilot, Adaptive Cards

Practices & tools: Jest, feature flags, i18n, Git, Jenkins, SonarQube, Jira, AI-assisted development (Cursor, Claude Code, MCP)

EDUCATION

University of North Carolina at Charlotte – Bachelor of Science in Psychology

August 2014 – December 2018

University of North Carolina at Charlotte – Full Stack Web Development Coding Certificate

July 2020 – October 2020
